MOHAMMAD WALID RAHMAN

SOFTWARE ENGINEERING UNDERGRADUATE | ASPIRING SOFTWARE ENGINEER

DakkshinKhan, Uttara, Dhaka - 1230, Bangladesh • **Phone:** 01648177033 •
walidrahman.officials@gmail.com • GitHub • Portfolio • LinkedIn

PROFESSIONAL SUMMARY

Software Engineering undergraduate at Daffodil International University with hands-on academic and personal project experience in full-stack web development, REST APIs, real-time communication, database-backed applications, and interactive interfaces. Works with JavaScript/TypeScript, React, Node.js, Express, MongoDB, relational databases, testing tools, and deployment workflows. Seeking software engineering internships or junior roles to contribute to practical product development and continue developing software design, backend engineering, and application-security skills.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, C, C++, Java, Python, Dart, PHP
Frontend	React, Vite, Tailwind CSS, HTML5, CSS3, Framer Motion, Zustand, TanStack Query
Backend & APIs	Node.js, Express, REST APIs, Socket.IO/WebSockets, JWT authentication, bcrypt, Zod, Mongoose, Prisma
Databases	MongoDB, PostgreSQL/PostGIS, MySQL, Supabase
Testing & DevOps	Jest, Supertest, Vitest, React Testing Library, Docker, Docker Compose, GitHub Actions, Nginx, Vercel
Tools & Other	Git, GitHub, VS Code, Figma, npm, Cloudinary, Mapbox GL JS; Flutter (learning); Data Structures in C

EDUCATION

B.Sc. in Software Engineering — **Expected 2028**
Daffodil International University, Bangladesh — 2024–2028

Higher Secondary Certificate (HSC) — **Completed 2023**
Milestone College, Bangladesh — 2021–2023

SELECTED PROJECTS

VeriChain — Product Authenticity & Supply-Chain Platform GitHub

Technologies: TypeScript, React, Node.js, Express, MongoDB

Full-stack platform concept for product authenticity verification and supply-chain traceability. Project workflows cover public product verification, role-based access, factory/product registration, inventory tracking, and marketplace functionality.

Real-Time Chat Application GitHub

Technologies: MERN stack, Socket.IO, JWT

Messaging application designed for one-to-one and group conversations, using Socket.IO for real-time client-server communication and authentication for protected user access.

Travel Bangladesh — Tourism & Heritage Platform GitHub

Technologies: TypeScript, Mapbox GL JS / mapping

Tourism and heritage discovery platform concept for exploring locations across Bangladesh, with map-based discovery, curated trails, and itinerary-planning features.

Project DeShark — Menswear E-commerce Platform GitHub

Technologies: MERN stack

E-commerce project focused on a modern menswear shopping experience, product presentation, and interactive user interface.

Online Budget Tracker GitHub

Technologies: JavaScript, Express, MongoDB

Personal-finance web application for recording income and expenses, organizing transactions, and presenting account balances.

ONGOING PROJECT

MediFinder — Medicine Search & Nearby Pharmacy Finder [In progress (GitHub)]

Technologies: MongoDB, Express.js, React.js, Node.js, JWT, Mongoose, Leaflet, OpenStreetMap

Ongoing academic project specified in a Software Requirements Specification (SRS). The planned web application helps users search medicines by brand or generic name and locate verified nearby pharmacies with availability, price, stock status, last-update time, opening status, map locations, and directions. Scope also defines medicine reservations, in-app availability notifications, pharmacy inventory management, reviews, and admin verification/moderation. Pharmacy stock is manually updated; the system does not provide medical advice, online payments, or delivery.

Engineering focus: role-based access for customers, pharmacy owners, and admins; REST API architecture; JWT authentication; password hashing with bcrypt; MongoDB geospatial indexing for distance-based pharmacy search; and structured requirements/use-case design.

Project note: Feature descriptions above reflect the SRS scope and planned design, not a claim that every feature is already implemented.

ADDITIONAL PROJECTS

Bank Management System — Console Application

Technologies: C, linked lists, structures, binary file I/O

Console-based banking program for account creation and management, login, balance viewing, deposits, and withdrawals. Uses linked-list-based record handling and file storage for persistence.

Personal Portfolio Website GitHub

Technologies: React, TypeScript, Express, MongoDB

Portfolio website presenting projects and technical skills. Repository information describes a React/TypeScript frontend with an Express/MongoDB backend, admin dashboard, and Docker/CI workflows.

ADDITIONAL INFORMATION

Languages: Bangla, English

Certifications: None listed

Target roles: Software Engineering Intern, Junior Software Engineer, Full-Stack Developer, Frontend Developer, Backend Developer.
